

L1 segment-level evidence aggregation
+ topological operators

calibrate — eight domains, evidence-ordered

gzbdb (boundary) entities (grouping) auxchain (auxiliary) fault-contact (activity)

gzeeb (fault 3-axis) attitudes, fossils, folds inferred (cover audit)

guards: 11-file preflight · build freshness
· mapping-table staleness

adjudication loop: editable mapping table → deterministic replay → revert = byte-identical
